

RENAL

Cellentia™-H

Cellulose triacetate, single-use,
hollow-fiber, high-flux hemodialyzer

Confidence

from the inside out

30

More than 30 years of experience in the design and manufacture of dialyzers

1 in 5 hemodialysis patients worldwide is treated with a Nipro dialyzer¹

R&D

Innovative solutions, with patient safety and product performance in mind

Industry expertise
Trusted worldwide
Innovative solutions

Best known for its signature line of high-performance **Elisio™-H** dialyzers, **Nipro also offers the Cellentia™-H single-use cellulose triacetate (CTA) dialyzer for hemodialysis patients with acute or chronic renal failure when standard therapy is judged to be inadequate.**

Patient safety

Nipro offers the only dialyzers in the U.S. market that are made without BPA and DEHP in any of the product components. This ensures patients receive treatment with a dialyzer that is safe and gentle while limiting the exposure to these well-known endocrine disruptors.²

In addition, the Nipro Cellentia dialyzer is designed with a CTA membrane, which offers a solution for treating patients who have difficulty tolerating standard hemodialysis filters made with polysulfone, polyethersulfone, or polyarylethersulfone.³

Proven performance

Dialyzer membranes are important in the success of hemodialysis therapies and adequacy. Matching dialyzer performance to the patient needs is critical in meeting the prescribed clearance goals.⁴

As part of Nipro's commitment to quality, all of its dialyzers are designed to meet high performance membrane (HPM) standards. The HPM classification system is used to identify hollow-fiber dialyzers that deliver an advanced level of performance.⁵

Cellentia-H

Every detail of the Cellentia dialyzer is designed to inspire confidence, from its internal membrane construction to its external housing.

Smooth mirror-like surface

Mirror finish on both ends of the hollow fibers optimizes blood rinse-back.⁶

CTA membrane

Cellulose triacetate is a thinner semisynthetic membrane material, which allows for optimized clearances.

Moire fiber structure

Crimp fiber allows homogeneous flow of dialysate, which enhances transmembrane solute passage.⁶

CTA membrane and housing are not made with BPA or DEHP, minimizing patient risk of endocrine disruption and related health issues.²

Excellent biocompatibility

CTA membrane biocompatibility optimizes transmembrane solute passage and minimizes potential for adverse reaction in patients.⁷

Dry gamma sterilization

Process optimized to reduce free radicals and enhance product safety.

Four dialyzer sizes

Available in 15H, 17H, 19H, and 21H sizes to enable treatments tailored to patient needs while providing cost efficiencies.

Specifications and in-vitro data

		Cellentia-15H	Cellentia-17H	Cellentia-19H	Cellentia-21H
Product code		DD+CT-C-15H	DD+CT-C-17H	DD+CT-C-19H	DD+CT-C-21H
Surface area (m²)		1.5	1.7	1.9	2.1
CLEARANCE (mL/min)					
	Blood (mL/min)	200 300 400 500	200 300 400 500	200 300 400 500	200 300 400 500

Technical information

Membrane polymer: Cellulose triacetate

Inner diameter: 200 microns

Membrane thickness: 15 microns

Maximum TMP: 500 mmHg

Header: Polypropylene

Housing: Polypropylene

Potting compound: Polyurethane

Sterilization: Gamma irradiation

In-vitro test conditions

Testing was performed in compliance with the evaluation standard for dialyzer performance called for by ANSI/AAMI ISO 8637.

- Test solution temperature:** 37° C
Ultrafiltration rate: 10 mL/min
- Ultrafiltration rate test solution:** Bovine blood
Hematocrit: 32%
- Priming volume (blood compartment) test solution:** Water
- Pressure drop:** 50 mmHg transmembrane pressure
- Maximum blood flow:** 500 mL/min
Maximum dialysate flow: 800 mL/min
- Minimum blood flow:** 200 mL/min
Minimum dialysate flow: 500 mL/min
