

Perfusion Packs

Custom made to order

CardioMed heart-lung packs embody the best in quality workmanship and materials. Designed to provide perfusionists with dependable components for open-heart surgery, our packs offer a fully contained, packaged solution that can be customized to meet clinical requirements.

Each heart-lung pack is packaged in a convenient double-wrapped tray with individually wrapped arterial/venous circuit tubing. Placed in a tray and double or single-wrapped (according to your needs), each extracorporeal circuit offers a choice of tubing also separately wrapped and identified.

CardioMed heart-lung packs and accessory lines are fabricated with the highest grade PVC tubing. If preferred, a Tygon tubing option is also available on demand.

Perfusion Packs
