

THE IDEAL LEARNING DEVICE

IV TRAINER

Order Number: CM-IVAT

This device realistically imitates the tactile sensations felt during venipuncture, allowing the user to puncture through its soft, skin-like membrane and access simulated veins underneath. The heavy duty base provides stability and helps keep the IV Trainer in one position.

CardioMed's IV Trainer is not only a fantastic tool for learning a variety of intravenous procedures, but its size is convenient enough to fit in the pocket of a labcoat!
